

Notice: There are two internships available:

1. Full Stack development internship on Php, html,css.
2. FrontEnd development using VueJS.

You have to choose between one of the two options.

Task Option 1 -php

The task is to create a todo application in php html css.

The UI will contain two pages.

Add Todo -

This page will contain a form where you can add Todo :

The form will contain two fields 1) Todo Title (Text) 2) DeadLine (Time and date)

Below the form there would be two buttons Submit and Clear(to clear the fields).

TODOs

This page will show all the ToDos in a table.

Every todo will contain three fields 1)Title 2)DeadLine

Every todo will have one button 1) Delete

Task Option 2 -VueJS

The task is to create a todo application in vueJs.

The UI will contain two pages.

Add Todo -

This page will contain a form where you can add Todo :

The form will contain two fields 1) Todo Title (Text) 2) DeadLine (Time and date)

Below the form there would be two buttons Submit and Clear(to clear the fields).

TODOs

This page will show all the ToDos in a table.

Every todo will contain three fields 1)Title 2)DeadLine

Every todo will have one button 1) Delete

Description of plugins used

You need to use Vuex for storing todos in state, dispatching actions for fetching , creating ,updating and deleting todos. Also while fetching you need to mutate the state with mutations.

To route components to url paths you need to use vue-router.

You can use Vuetify which is a component library for vue. Where you'll get pre made components for UI like buttons, text fields,card,datalist etc.

You can refer to the documentation of these plugin for help.

I recommend you to refer to [this YouTube series](#) Which guides on how to use this stack using an example.
